

CI-Series Chemical Injection Skid

The Everfilt® CI-Series Chemical Injection Skid offers our customers who require chemical injection a simple turnkey solution, that is both effective and robust as an available standard option. Ideal when in conjunction with Everfilt® I-Series Iron Removal Filters.

The CI-Series is proven to perform in the toughest of environments, given the carbon steel construction and 2-part epoxy exterior finish in a color of your choice. Integrated spill containment tray provides 11 gallons of storage in the event of a spill.

Key Features

Steel coated safety chain and vertical uprights finished in bright yellow, provide additional safety precaution. With quality and features in mind, we equipped the CI-Series with an LMI Metering Pump and Auto Prime Valve, capable of up-to: **42 GPD @ 50 PSI**. The CI-Series optimizes injection consumption, while providing optimal results in a turnkey industrial grade package.

Simple, small skid-mounted system that allows for easy maneuverability by forklift. Vertical support to secure tanks with either clamps or strap mechanism. The stand or mount allows metering pump, hoses and fittings to securely mount onto.

Possible enclosure compatibility to house pump for protection from the elements. Clear chemical tank allows for easy visual inspection. If more chemicals are needed or more than 55 gallons, the skids can be connected to allow for multiple drums to run in series.
