

## Sacrificial Anode Retrofit Kit PN-4008-10

The Sacrificial Anode Retrofit Kit is available with all applicable systems and is a great way for you to replace and have the parts needed to prevent future corrosion of systems. All anodes are high-grade magnesium and essential for your system to last longer. Recommended change interval when anode is 50% consumed.

**Something to think about:** your water heater has one primary function, and that is to heat water. It does this pretty well most of the time, by conducting heat through metal and warming up gallons of water, that is then moved through your home when you turn on the tap. Yet, this goes against everything you've ever learned – water rusts metal, right?

Water most certainly rusts metal and your water heater would be a crumbling mess without a small rod inserted into the top of the tank. This rod is called an anode rod (or sometimes a sacrificial anode rod) and it is the only reason your water heater hasn't left you bathing in rusty water.

### Key Features

- Anode , 1" x 18" ( Magnesium )
- 8.62" x 0.62" Fillport Cover
- Cable, GND, BLK #6 x 36"
- Screws, Cap, Washer, Nuts, Coupling Included

### Available Options

- Custom Sizes Available
- Carbon Steel Tank Compatible
- Extra Anode Included w/ Any Tank
- Anode Retro Fit Kits Standard
